

## BOOK REVIEW

1994SoPh...154...203B

A. O. Benz, *Plasma Astrophysics*, Kluwer Academic Publishers, Dordrecht, Holland, 299 pp., 1993, hardback Dfl. 185.00/US \$99.00/UK £71.00, ISBN 0-7923-24929-3.

The textbook is an introduction to plasma astrophysics applied to physical processes in solar and stellar coronae. It addresses advanced undergraduates and graduate students without knowledge of plasma physics. The main quality of the book is the surveyable and clear treatment of the observational aspects of coronae and the wealth of physical processes that are important for their understanding. Apart from educational purposes the book is also suitable for professional workers in plasma astrophysics as a reference book.
